AI Engineer - About me

AI Engineer and Systems Engineering student at UTN.BA, specialized in Agentic AI, RAG, local LLM inference, and enterprise automation. I design secure AI solutions that combine software architecture, corporate integrations, governance, and business adoption across multinational environments. Communication is one of my main strengths. I'm extroverted, work very well in teams, and connect easily with diverse people.

Work Experience

AI Engineer Intern | ABB • Remote

Oct 2025 - Present

- Design modular multi-agent architectures using LangGraph, including routing, specialized agents, shared context, tool execution, validation, and HITL controls.
- Define RAG and GraphRAG pipelines covering ingestion, chunking, embeddings, vector search, and grounded response generation.
- Design local AI architectures using vLLM, Qdrant, PostgreSQL, FastAPI, and containerized services.
- Apply Hexagonal Architecture, SSO, RBAC, guardrails, auditability, workflow validation, and HITL approval points.

AI Engineer | Spinlab • Remote

Apr 2025 - Present

- Build intelligent workflows using Power Automate, AI Builder, Azure AI Foundry, SharePoint, Microsoft 365, Power Apps, and enterprise APIs.
- Delivered a high-visibility AI-enabled solution for the office of the Regional President, Latin America.
- Translate business requirements into secure workflows combining document processing, approvals, data integration, and AI-assisted automation.
- Collaborate with stakeholders throughout requirements, prototyping, validation, deployment, and adoption.

AI Quality Analyst | Outlier AI • Remote (freelance)

Jun 2025 - Dec 2025

- Evaluated and improved generative AI models through RLHF, designing prompts, test scenarios, and structured rubrics covering instruction following, truthfulness, completeness, correctness, and style.
- Reviewed tool usage, including function calls, APIs, and search, and contributed to refining evaluation guidelines to improve model quality, consistency, and safety.

Education

Universidad Tecnológica Nacional (UTN.BA)

2022 - 2028

- Systems Engineering (in progress). Strong foundation in algorithms, data structures, databases, networks, operating systems
- How applications, infrastructure, data, users, and business processes interact across an organization, and translating complex operational needs into reliable, scalable, and maintainable architectures

Instituto San Vicente Pallotti

2015 - 2021

- High School Diploma in Business Management and Administration

Languages

- **Spanish** – Native
- **English** – Upper-intermediate (B2 Certified)
